QUALITY MADE IN GERMANY

FLEXIBLE ENDOSCOPES

Laryngoscope 2.8 / 3.2 / 3.4mm

The new German designed fiber-optic Laryngoscope multiple lens optical system gives a crystal clear image. The extremely thin entry tube is highly flexible and therefore precise work can be done on inaccessible regions. Bigger wide angle with exceptional depth of focus. Illumination of the subject under examination is achieved through two light guides. The flexible entry tube moves precisely to the command of an ergonomically designed well-balanced handpiece. Standard connection is sealed from moisture.

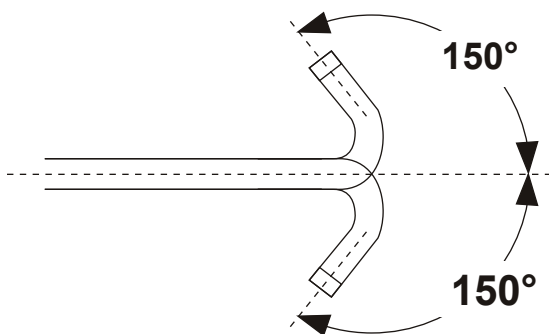

Ergonomic handpiece

Fluent and dynamical move
